1993 Graduates

THE University Presidents' Council OF BRITISH COLUMBIA

FIVE YEARS AFTER GRADUATION • 1998 SURVEY HIGHLIGHTS

About the 1998 Survey Highlights

The *1998 Survey Highlights* summarize the results of a five-year follow-up survey of 1993 graduates from baccalaureate programs at the University of British Columbia, the University of Victoria, and Simon Fraser University.

The class of 1993 was interviewed at two points in time: in 1995, two years after graduation and in 1998, five years after graduation. Interviewing this cohort twice provided an opportunity to look at the transitions that took place over the three-year period between surveys. Of 9,932 eligible 1993 graduates, 7,490 participated in the two-year out survey and 4,744 in the five-year out survey. Eighty-six percent of those surveyed in 1998 had been surveyed in 1995.

These surveys were conducted by the University Student Outcomes Project, which is a long-term research project dedicated to gathering student outcomes information for British Columbia's universities and the Province of British Columbia. The University Presidents' Council and the Ministry of Advanced Education, Training and Technology established the project. It is directed by the University Outcomes Working Committee and is managed by the Centre for Education Information.

Since 1995, the project has been tracking outcomes of baccalaureate graduates from British Columbia's public universities. Currently five institutions participate: University of Northern British Columbia, Simon Fraser University, University of British Columbia, University of Victoria, and Royal Roads University. Graduates are asked about satisfaction with their program, their skill development, their employment and further education outcomes, and about their sources of financing for education.

In the Survey Highlights

- *Where are 1993 university graduates five years after graduation?*
- *Are graduates satisfied with their education?*
- *How many graduates enrol in further education?*
- *What are graduates' transition patterns?*
- *What are the employment outcomes for BC graduates?*
- *How did graduates finance their education?*

Where are 1993 university graduates five years after graduation?

Five years after graduation the majority of 1993 graduates surveyed were living in BC (87%). Of the 13 percent who left BC, most stayed in Canada. The top two reasons for leaving the province were employment (34%) and further education (30%).

A small percentage of respondents—only 1.7 percent—left Canada for the USA. This result was similar to the national average of 1.5 percent reported by Statistics Canada in the National Graduate Survey of 1993 graduates.

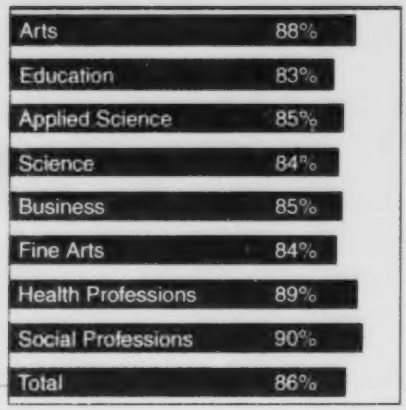
Are graduates satisfied with their education?

Five years after graduation, 86 percent of respondents reported being either satisfied or very satisfied with their university experience. There was not a great deal of variation in the levels of satisfaction across program areas. Overall, only 2 percent said they were "very dissatisfied."

The majority of graduates were satisfied with their university experience.

Those who reported they had learned a significant amount were also likely to report they were satisfied with their program. Of those students who reported they developed their "ability to analyze and think critically" to a "great extent," 92 percent indicated they were satisfied with their program—of those who did not report developing this ability, only 42 percent indicated they were satisfied.



1998 respondents "satisfied" or "very satisfied" with program

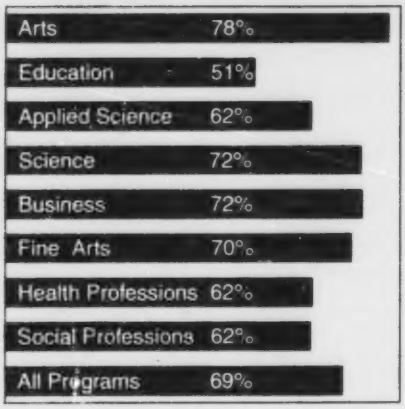
Two-thirds of all graduates surveyed said that they would take the same program again. However, fewer Arts (60%) and Sciences (61%) respondents said they would take the same program again, compared with those who enrolled in fields of study like Education (76%), Health (75%), and Business (75%).

How many graduates enrol in further education?

When surveyed two years after graduation, 29 percent of graduates were enrolled in further education. Five years after graduation, the rate dropped to 18 percent.

In all, 69 percent of 1998 respondents had enrolled in some form of further education since graduation, and of those, 59 percent reported they had pursued some further university education. The majority of graduates who did not pursue further university studies took specific professional training or certification.

Two-thirds of graduates enrolled in some further education.



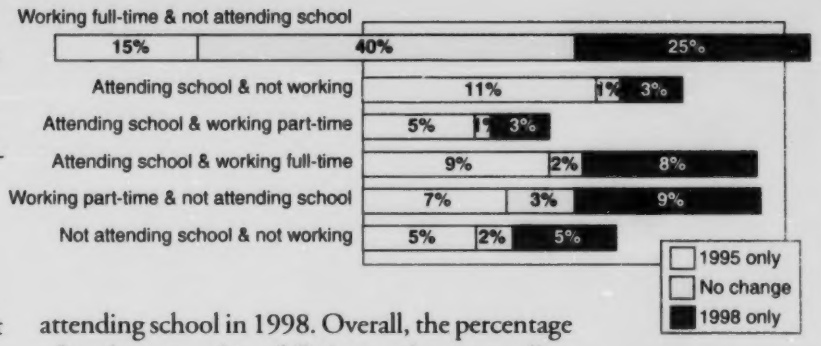
1998 respondents enrolled in further education since graduation

Over two-thirds of graduates surveyed cited "professional development" or "career goals" as their reason for taking further education. The "desire to study at an advanced level" or "general interest/personal development" were the second most common reasons, each reported by 17 percent of graduates.

Five years after graduation, only 7 percent of respondents cited lack of suitable job opportunities with their current education level as a reason for continuing their education. This was lower than the 16 percent who cited this reason two years after graduation.

What are graduates' transition patterns?

The surveys revealed that there were a variety of transitional paths from school to work among university graduates. The graph to the right illustrates that many graduates went directly from school to full-time work, while others participated in some combination of work and school—either full-time or part-time—or did not work or study. The graph also shows the percentages of students whose employment or educational situation did not change from 1995 to 1998.



transitions from school to work

The top bar of the graph shows that of those graduates who responded to both surveys, 40 percent were working full-time and not attending school in both 1995 and 1998. Fifteen percent of graduates—the far left segment of the top bar—were also working full-time and not attending school in 1995; however, by 1998 their work and study situation had changed. The far right segment shows the 25 percent of graduates who moved from some other combination of work and study in 1995 to working full-time and not attending school in 1998. Overall, the percentage of graduates working full-time and not attending school increased from 55 percent in 1995 to 65 percent in 1998.

Many graduates experienced indirect transitions to work from school.

For a small minority of respondents, transition to work was slow. Comparing the unemployment rates of graduates two and five years after graduation, there was a decline from 3.4 percent to 2.1 percent. The declines in unemployment rates over the three-year interval were most dramatic in fields where initial unemployment was highest. In Fine Arts, the rate fell from 9.3 percent to 4.3 percent, and in Arts the rate fell from 4.2 percent to 2.1 percent.

When asked how transition into employment could be improved, 36 percent of respondents said that opportunities for students to do some career-related work while in the program would help. Very few students (6%) suggested that job search seminars would ease the transition.

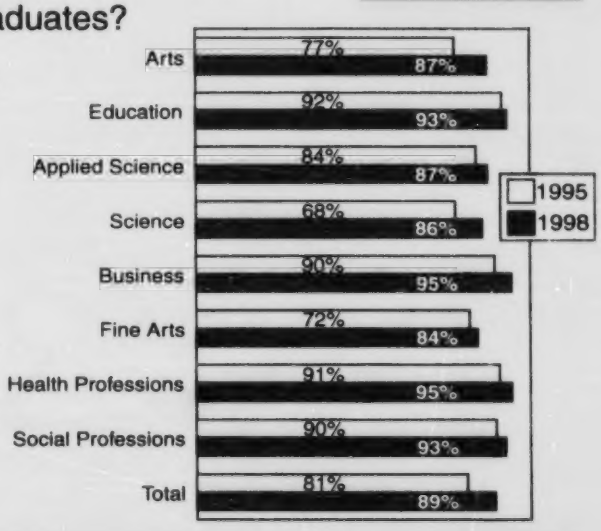
graduates employed in both survey years

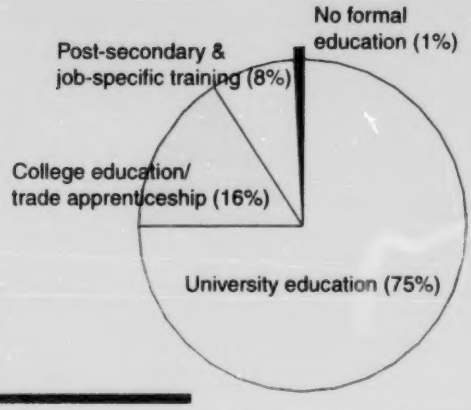
What are the employment outcomes for BC graduates?

Most graduates surveyed were employed both two and five years after graduation, 81 percent and 89 percent respectively.

Self-employed graduates accounted for 15 percent of employed graduates in 1998, as compared to 10 percent in 1995.

About half of the respondents had changed jobs in the three years between surveys. Business graduates were the most likely (68%) and Education graduates the least likely (32%) to experience a job change. Of those who changed jobs, Health, Education, and Social graduates noted their new positions were more related to their education—for all other program areas the reverse was true.

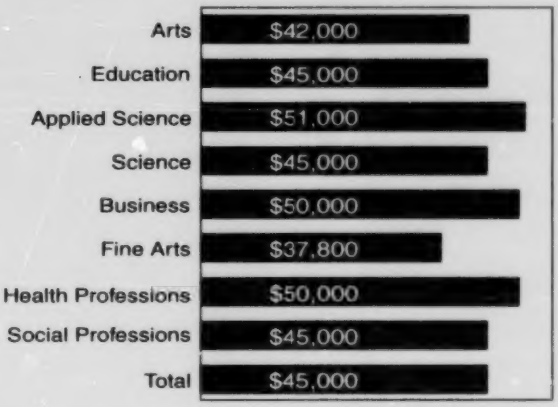




No formal education (1%)
Post-secondary & job-specific training (8%)
College education/ trade apprenticeship (16%)
University education (75%)

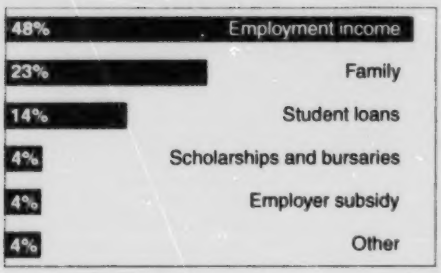
skill level required for employment

Three-quarters of all employed graduates were working in jobs requiring a university education, while 16 percent were employed in positions requiring college or trade level education. Fewer than 10 percent of employed respondents were in jobs that required only secondary school education and specific job training.



1998 median salary

The majority of employed graduates were better paid in 1998 than in 1995. The median annual full-time salary for graduates rose from $34,400 in 1995 to $45,000 in 1998—an increase of over 30 percent. Job satisfaction increased over this period as well. Five years after graduation, 73 percent of working respondents were more satisfied with their job than with the job they had in 1995.



sources of funding

How did graduates finance their education?

Graduates' primary source of funding for financing their university education was employment income (48%). Financial support from family members (23%) was second, followed by student loans (14%).

Forty-four percent of graduates incurred debt—the median amount was $12,500, and the mean was $15,200. Twelve percent of respondents had less then $5,000 in debt, while 10 percent of respondents incurred debt over $30,000. After five years, 48 percent of those with debt had repaid their loans.

After five years, almost half of graduates with debt had repaid their loans.

Introduction

This report summarizes the results of the follow-up survey of 1993 graduates from undergraduate programs at three British Columbia Universities: University of British Columbia (UBC), University of Victoria (UVic) and Simon Fraser University (SFU). The survey is one in an ongoing series of surveys of graduates of B.C. universities conducted jointly by B.C. universities. The survey is intended to be a general accountability document for the province, providing evidence that B.C. universities are successful in producing well-educated graduates who make a strong positive contribution to the community and the economy. The survey is also intended to provide feedback to the universities from their graduates, and to serve as a source of information for policy review and creation, and strategic planning. Finally, the survey is intended to be of use to individual students and prospective students of B.C. universities; providing them with first hand information in statistical summary form, of what they can expect from a university degree at a B.C. university.

This survey is unique in that it is the first time in which a cohort of graduates has been surveyed twice: once two years after graduation in 1995, then again in 1998. This provides an opportunity to look at the changes that occur over the three-year period between two and five years out. These changes are important, since single point in time surveys, especially those done after one or two years, do not present an accurate picture of the outcomes of a university education. The research shown here and elsewhere shows that a university education continues to enhance the lives and economic prospects of graduates over a very long period. Wherever possible, this report attempts to identify the growth and change occurring over just this short three-year period.

The report is intended primarily to be a summary at the system level. Much of the important information for universities and students is at the level of individual programs, and will be produced internally by the universities. For this report the programs have been aggregated into eight broad categories (see Appendix A) taken from the Statistics Canada classification of programs. These broad categories are not always comparable between universities, but they do provide a very effective and compact way to compare the effects of the discipline on the outcomes of a university education (see frequency distributions and statistical summaries by university and program in Appendix B and D).

The survey attempted to contact each of about 10,000 university graduates by telephone (refer to survey instrument in Appendix C), with a final response rate of 48%. However, the response rate is not indicative of a refusal on the part of graduates to respond to the survey. Only 6% of respondents outright refused to participate. The vast majority of graduates could not be contacted by telephone, either due to lack of information, or the increasing use of answering machines to which graduates did not call back. Analysis of the response pattern shows no obvious reason to suspect bias in the survey.

Where do B.C. University Graduates Go?

Five years after graduation, the vast majority (87%) of 1993 B.C. university graduates were still living in B.C. Other popular destinations were Ontario (3.1%) and Alberta (2.7%). Only 1.7% of 1993 graduates went to the United States.

Statistics from the class of 1991[1] show similar destinations after five years: 91% were living in B.C., 2.8% in Ontario, 2.0% in Alberta and 2.6% in the U.S.A.

Contrary to the concern that B.C. is losing graduates in the more "job-oriented" disciplines, in fact students in Science are most likely to leave B.C. (20%), while Education graduates are least likely to leave (6%). There is, however, both in the survey of '93 grads, and the survey of '91 grads, a consistent and relatively high proportion of Applied Science graduates (5 to 7%) who migrate to the U.S.A. within five years of completing their bachelor's degree.

Most graduates who leave B.C. do so soon after graduation; 49% left within one year of graduation, whereas only 8% left within the most recent year.

The most common reason for leaving B.C., cited by 37% of respondents, was employment or the economy; education was the second largest reason at 30%. Of those who left B.C. within one year of graduating, 25% left for education reasons. Women and men differed markedly with respect to reasons for leaving, with the biggest difference being that 24% of women cited "family/spouse" as the reason for leaving, versus only 6% of men.

These numbers of graduates leaving Canada for the U.S. are very similar to the national average reported by Statistics Canada. The National Graduate Survey (NGS) showed 1.5% of the graduates of 1993 having left Canada for the U.S., while the B.C. survey shows 1.7%. For British Columbia graduates, Ontario and Alberta still attract far more graduates than does the U.S.

Graduates' Perceptions of their Programs

One of the most concise indicators of accountability for the B.C. universities is the response to the question: "How satisfied were you with the educational experience you had in the "x" program at "y" university?" Five years after graduation 86% of graduates report being satisfied or very satisfied. In terms of the broad program areas there is not a great deal of variation in the levels of satisfaction. In particular, there seems to be no

---

[1] Sudmant, Walter and Joanne Heslop (1997). *Five-Year Graduate Follow-up Survey of 1991 Baccalaureate Graduates from BC's Public Universities: Report of Findings.* The University Presidents' Council of British Columbia.

trend toward greater satisfaction in the more applied areas, as is sometimes suggested. There is also no particular area that stands out in terms of dissatisfaction for these broad categories of disciplines; in every case, fewer than 3% were "very dissatisfied". By university, UBC graduates are slightly less satisfied than others (UBC 82% satisfied, versus SFU 90%, and UVic 89%).

Nevertheless, a response of "very dissatisfied" warrants investigation. Two points emerge from the data. First, there is a substantial correlation between the satisfaction of graduates and their rating of how much they learned. For example, of those students who developed their "ability to analyze and think critically" to a "great extent", 92% were satisfied, whereas of those who did not develop this ability at all, only 42% were satisfied. Second, though there are some programs with higher levels of satisfaction than others, "dissatisfaction" per se appears throughout the data. One conclusion could be that there is a minority of students for whom university education may not be appropriate, in the sense that they report both low levels of accomplishment and low levels of satisfaction; it's not for them. The correlation between earnings and satisfaction is not significant; despite reporting a poor experience, even many of the dissatisfied graduates do well in the labour market.

Another way to approach the question of graduates' perceptions of their programs is to ask whether they would take the same program again, in hindsight. It is important to realize that this is not at all the same question as "Were you satisfied with the program?" Many students report high levels of satisfaction with their university studies, yet in view of their experiences in the workforce, say that in retrospect they would have taken another program. Two thirds of all graduates would take the same program again, while the remaining third would take a different program. Arts and Sciences graduates showed the lowest rates of taking the same program again (60%), whereas the more specific job-related areas showed the highest rates (Social Professions 77%, Education 76%, Health 75%, Business 75%). A particularly outstanding statistic for this question was for graduates of the SFU Applied Science program, where 94% would take the program again; a particularly low rate was for the graduates of Fine and Performing Arts at SFU, where only 28% of graduates would take the program again.

Transitions

Other research on the experiences of university graduates shows that while graduates from nearly all programs have good long-term employment prospects[2], there is relatively little data on the transitions of university graduates into the labour market, and some evidence to suggest they sometimes experience transition difficulties that distort the statistics. This survey provides a unique opportunity to look in more detail at the transition period. We look at the status of university graduates: two years after

[2] Allen, Robert C. (1998). *The Employability of University Graduates in the Humanities, Social Sciences and Education: Recent Statistical Evidence*. Ottawa: Social Science and Humanities Research Council of Canada.

graduation and five years after graduation. Table 1 shows the transition between work and school states between 1995 and 1998.

Only 39.6% of graduates are both full-time employed, and not in school at both points in time. While this pattern is still the largest single cell in the matrix, it is clear that for over half of university graduates, a simple break from education and transition to permanent full-time employment is not the norm. On the other hand, the chance of being both not in school and not employed at both points in time (perhaps indicative of chronic unemployment) is virtually nil. Only 1.7% of graduates exhibit such a state, and further investigation of this group shows that nearly all of them have withdrawn from the labour force for a variety of reasons, including parenting. Long-term unemployment is virtually non-existent among university graduates.

Table 1. Transitions of 1993 B.C. Baccalaureate Graduates between work and school: 1995 to 1998.

BC SYSTEM (N=3,999)			1998 State: FT School – FT Work	FT School – PT Work	FT School – NOT Working	PT School – FT Work	PT School – PT Work	PT School – NOT Working	NOT in School – FT Work	NOT in School – PT Work	NOT in School – NOT Working	TOTAL

Sum(Main Diagonal) = No Change = 48.0%

Notes:

1) Includes 3,999 graduates of 1993 surveyed in both 1995 and 1998 (excluding 'no response' and 'don't know' re. school/work).
2) Values in main diagonal indicate those who remained in the SAME state from 1995 to 1998.
3) Bold values indicate popular state transitions (>5%).
4) Circled cells are discussed in this report.

The rest of the matrix reveals the many and varied transitions and paths taken by university graduates. Since there are so many cells, the numbers in each are relatively small, but some interesting observations can be made: The most common transition is from that of a full time student and not working (i.e. returned to full time schooling) to not in school and full time work (6.3%). Whereas, the so called "perpetual student" – those who are full time students and not working at both points in time comprise only 1.0% of all graduates.

The purpose of the foregoing analysis of transitions at two points in time is, first to illustrate the degree to which graduates are still in a transition period during the first five years after graduation. It is very difficult to make comparisons with the general population on the basis of two year or five year surveys, especially regarding underemployment. Second, there may be policies that can improve the transition of university graduates to the labour market. To some extent, of course, the transition is a necessary time of information gathering about the labour market. All young people must experience transitions in their own lives to find their place in the working world. However there is evidence that graduates waste time after graduation due to inadequate labour market information. Policies supporting career counseling, co-op and work study programs, and greater liaisons between business and university may yield both economic and personal benefits in terms of easing the transition.

The survey asked students how the transition into the labour force could be improved. The most frequent type of response (36%) related to the opportunity for students to do some career related work while in the program; some graduates specifically stated "co-op" programs, while others gave more general answers such as "work and study options", or arranged work experience, or "internships". Very few students (6%) felt that the teaching of job search skills, or job search seminars would be useful in easing the transition.

Also of interest is that a relatively small proportion (17%) of respondents actually cited educational content (i.e. more practical skills) as a problem in transition. Evidently graduates' perceptions five years after graduation are consistent with the research: the education serves them well, but they have difficulty in finding the right place in the labour market.

Further Education

Over two thirds of bachelor's degree graduates continue on to some form of further education, and they tend to do so quite soon after graduation. Three quarters of all those who went on to further education did so within two years of graduation. By far the highest rate of further education was for graduates of the Faculties of Arts, at 78%. This is explained in large part by the relatively large fraction of Arts students who go on to take teacher training programs (17%). Education graduates show the lowest tendency to go on to further education (51%), since in most cases the Education degree is already a second degree. From among first degree programs, Applied Science graduates show the lowest rate of continuing education (62%).

By far the largest single type of further education for graduates was the pursuit of a Master's degree. Twenty percent of those who continued with further education reported pursuing a Master's degree. Though it is sometimes suggested that university graduates pursue technical or vocational training in search of a job after graduation, our survey shows that this is not true. The majority of graduates (59%) pursue some further

university level education. Of those who do not pursue further university education, the largest numbers pursue some very specific professional education. Graduates frequently cite non-university courses related to professional training requirements (e.g. the Chartered Accountancy program) though a large variety of short, multiple course programs are mentioned (e.g. legal training, computer courses).

Why More Education?

A key question for prospective students and policy makers alike is "Why did university graduates go on to further education?" The answer is that over two thirds of graduates cited "professional development" or "career goals" as their reason for further education. Only 7% cited "lack of suitable job opportunities with their current education level". The second most common reason at 17% was "the desire to study at an advanced level" or "general interest/personal development", as distinguished from career-related goals. From the survey we see a picture emerging of university graduates who return for further academic education. Contrary to the cynical view that a return to post-secondary education indicates a kind of "starting from scratch" after discovering a lack of opportunities, the evidence is strongly in favour of the "repeat customer" hypothesis: graduates find high value in their university education, and continue to enhance that value through further education – often at the university level.

The lowest percentage of graduates who returned to school due to "lack of employment opportunities" was for Business graduates at 2%, while the highest was for Science graduates at 9%. Open-ended responses of Science students suggest that they have expectations of finding work more directly related to their Science degree, hence Science graduates are returning to school after obtaining labour market information through personal experience.

These findings on why graduates pursue further education are somewhat at odds with the survey of graduates two years after graduation, where a much higher proportion of graduates (16%) indicated they returned to school due to a lack of suitable employment opportunities. The explanation for the difference is another manifestation of difficulty in transition to the workplace. After two years, 16% of graduates have still not found their place in the workplace – and return to school for lack of suitable employment. After five years, most graduates have made the transition, and are returning to school for career-related reasons.

Perhaps the most optimistic finding of this survey is the fact that 83% of those who went on to further education did achieve their goal, and the success rate is relatively constant across the disciplines. The evidence suggests that once graduates have spent some time in the labour market, they are in a very good position to make some successful choices about enhancing their university education.

Another indication of the transition period during the first five years after graduation is the rapid falling off in the percentage of graduates who are still attending school. Two years after graduation almost a third of graduates (29%) are still attending some form of school; after five years the rate drops off to 18%. The most dramatic drop is for Science graduates, where the rate falls from 40% to 22%, probably for the reasons given above. Although it is a relatively low participation rate, Education graduates actually increase their rate of school participation from 12% to 14%, indicating perhaps a commitment to lifelong learning, or the incentive structure for further education of teachers.

A final insight into the nature of graduates' further education is provided by whether they are engaged in full-time or part-time education. Overall, about half of those attending school are part-time, but this masks major differences in the disciplines. Of Education graduates, 80% are part-time, whereas Science graduates tend to be mostly full-time. Science graduates stand out, both two years after graduation and five years after graduation, as being by far the most likely to be engaged in full-time studies, most often at the graduate level.

The Employment of University Graduates

Most university graduates are employed, both two years after graduation (81%) and five years after graduation (89%). For graduates five years out, the rate ranges from a high of 95% in Business, to a low of 84% for Fine Arts graduates. However this "employment rate" must not be confused with the converse of the "unemployment rate"; many graduates who are not employed are actually not seeking employment, but are full-time students. Therefore the variation we see among disciplines is actually in large part a reflection of the rate that graduates remain out of the work force (though that in itself is still a useful indicator).

In order to calculate an "unemployment rate" more comparable with the rate calculated by Statistics Canada, and widely published as an indicator of economic health, we adjust the numbers by subtracting from the calculation those graduates who are not in the labour force (i.e. currently unemployed and not seeking a job). Once these adjustments have been made, we calculate an unemployment rate for university graduates five years after graduation of 2.1% – a remarkably low unemployment rate when compared with the rate for the overall labour force (for Vancouver, in 1999 the unemployment rate averaged 7.8%). The lowest rates of unemployment occurred for the Health Professions (0.7%), Business (1.3%), Education (1.5%) and Social Professions (1.6%), and the highest rate occurred for graduates of Applied Science, at 4.9%. It is difficult to attribute much meaning to the variations in unemployment rates among disciplines, since at levels of unemployment which are this low, the unemployment is very much the result of "friction" (i.e. the healthy economic behaviour of people making transitions to more suitable jobs, as well as the related effect of unemployment during the early months after completion of subsequent education).

It is also interesting to note that of those graduates who are not in the labour force, by far the largest fraction (30%) are in school, and unemployed graduates of Science programs are by far the most likely to be in school (54%). The second most likely reason to be out of the labour force was "homemaker or family obligations", at 23%. Out of our sample of over 4,700 university graduates, only five people reported that they were unemployed because they "lacked the necessary skills for the desired job". University graduates are clearly strongly motivated to make the transition to the labour market, and the case of the perpetually unemployed graduate with non-marketable skills is very rare – almost non-existent.

The high rates of employment of university graduates are sometimes criticized for not taking into account the phenomenon of "underemployment": the claim is that while graduates are employed, they are either only employed part-time, or they are employed in a job not well suited to their university education. We examine both of these issues from the survey data.

Seventeen percent of employed respondents were employed part-time. However, a majority (72%) of these part-time employees reported that they were working part-time by choice. As a fraction of all graduates, 11% were working part-time when in fact they wanted to work full-time. The largest single group of these was Education graduates who had not yet found full-time teaching jobs. Some graduates (working both full-time and part-time) held more than one job (13%), however looking back at the survey of '95, there is no evidence that this phenomenon is increasing.

Current Jobs

The survey asked graduates for detailed information on their current job which was then coded into industry codes (NAICS) and occupational codes (NOC). Three quarters of all university graduates work in jobs requiring a university education (as defined by the NOC skill levels), and a further 16% work in a job requiring a college education or trade. Fewer than 10% of employed university graduates are in jobs requiring only secondary school education or specific job training. Education graduates (who require a degree to work in the schools) ranked highest on this indicator, with 93% working in a job requiring university training, whereas Fine Arts (59%) and Business and Commerce (62%) ranked lowest. The low proportion of Business and Commerce graduates working in such jobs is explained by the high proportion of these graduates who work in the "Sales and Service" sector, where a degree may not be required, but advancement is certainly related to the level of education. For graduates of Arts programs, where the myth of unused university education is strongest, the survey shows 65% working in a field requiring university education, and another 22% requiring a college education.

In terms of industry sector, the overwhelmingly largest sector to employ university graduates is "Educational Services", employing 36% of all graduates, with a distant second place for "Professional, Scientific, and Technical Services", at 14%. The high numbers of university graduates working in Education is consistent with the National

Graduate Survey – it has always been the case that teaching is the largest single occupation of university graduates. The resource industries (Forestry, Fishing, Mining, etc.) employ only about 1% of university graduates, while manufacturing employs 3%. University graduates are employed in the "knowledge economy"; industries with high growth, high productivity, and high projected future demand.

The industrial sectors employing graduates vary significantly, in an expected way, by discipline. Applied Science graduates are much more likely to work in manufacturing (17%, versus 3% for the entire group); Health Professionals are more likely to work in Health Care (44% versus 10%), and Education graduates are much more likely to work in the Education sector (88% versus 36%). While the largest percentage of Arts graduates work in the Education sector (34%), it is important to note that large numbers of Arts graduates work in Public Administration (15%) and Professional, Scientific or Technical Services (13%).

Since the connection between education and the labour market is of so much interest to both individuals and policy makers, the survey also addresses the question of relevance to the job market more directly. First, graduates were asked whether their job was related to their program. This is somewhat of a standard question, and a very similar question is asked on the National Graduate Survey. The overall response is that 67% report that their jobs are related to their university program. There is considerable variation by program, with Social Professions and Education showing very high proportions with related jobs (90% and 86%), and Arts graduates at 49%.

However, the survey asked a second question: "To what extent do you agree that the skills and knowledge acquired in your (name of program) at (university) are applied to your job?" The distinction between this question and the previous question is critical, in that this question is much more relevant to the mandate and purpose of university education. While many graduates never work in a field related to their discipline (e.g. History, Philosophy), the question we seek to answer is whether the skills and abilities they acquire can be generalized to the labour market. The answer is a clear yes. Across all disciplines, 86% of graduates agree with the statement above, and the variation among disciplines becomes much smaller than to the previous question. The greatest distinction between the responses to the two relatedness questions occurs for Arts graduates, where only 49% work in a related field, but 84% agree that they apply skills and knowledge acquired at university to their jobs.

The overall picture of the flow of university graduates into the labour market, both by industrial sector and skill level, suggests that university graduates are in demand in the growth sectors of the economy, often work in fields directly related to their field of study, and in the great majority of cases working in jobs which require the highly educated employees supplied by the universities.

Self Employment

Self-employment is often cited as one of the drivers of economic growth, hence, the survey asked whether university graduates were self-employed. Of employed graduates, 15% were self-employed (one to two percent higher than the national labour force average). However, comparison with the self-employment status of these graduates after only two years shows a significant increase in the numbers of self-employed graduates over time. In the 1995 survey, 10% were self-employed. By far the highest fraction of self-employed graduates was amongst Fine and Performing Arts graduates, where 41% were self-employed. (Education was lowest, at 6%).

For those who were self employed, apparently their businesses are growing. In 1995, 30% of self-employed graduates employed someone else; by 1998 the percentage employing others had grown to 39%. While Business graduates are not particularly likely to be self-employed, when they are self-employed, they tend to have a larger business: 57% of them employed more than one person.

Current Job Earnings

The median of annual full-time employment earnings[3] for graduates of 1993, five years after graduation, across all disciplines, was $45,000, with a high median of $51,000 in Applied Science, and a low of $37,800 in Fine Arts. It is significant to note that, as in many salary surveys, salaries of men are approximately 10% higher than the salaries of women; this difference is not a result of the differences in disciplinary distribution between men and women; the differential is present within most disciplines. For the most part, salaries are clustered in the $35,000 to $55,000 range.

Changes Between 1995 and 1998

Many surveys of university graduates are conducted two years after graduation (eg. The National Graduate Survey) using the argument that we want current information on relatively recent graduates, since that information best reflects the programs as they now exist. Others have argued that two years is insufficient to measure the real employment, personal, and cultural effects of a university education. This survey provides us with a unique opportunity to compare indicators at two points in time: two years after graduation and five years after graduation. While five years is still an insufficient time span to examine the life-long impacts of a university education, this study does provide an opportunity to look at trends in the working lives of students, and provide some

[3] Responses to this question differ from all others in the higher proportion of respondents who did not answer (17%)

evidence addressing questions pertaining to the lifelong career paths of university graduates.

Insight into the labour market experiences of university graduates can be gained from this survey by comparing the unemployment rates of the graduates of 1993 two years after graduation with the rate five years after graduation: it declines significantly, from 3.4% to 2.1%. More importantly, the declines in unemployment rates during the three-year interval are most dramatic in the fields where initial unemployment was highest [4]. In the Fine Arts, the rate fell from 9.3% to 4.3%, and in Arts the rate fell from 4.2% to the overall average of 2.1%. Not only should this trend be viewed as very encouraging for job seekers in all fields, it should also be taken as strong evidence that a transition problem exists, and that this transition takes longer for those fields of study which are less employment specific. Once again, we see that graduates need to explore the labour market for some considerable time before coming into equilibrium, and that early measures should be interpreted cautiously.

Employed graduates were asked if their current job was the same as the job they had reported in 1995, two years after graduation. The purposes of this question were: 1) to give graduates and current students some idea of what to expect in terms of the job market; 2) to give some statistical substance to the often made claim that people should expect, and perhaps even seek out, considerable change in their jobs, especially early in their working lives; and 3) to provide some baseline data to determine whether the job market is becoming more unstable, as we survey subsequent graduate cohorts. In fact about half of the graduates had changed jobs within three years. Business graduates were by far the most likely to change jobs (68%), and Education graduates were the least likely, at 32%.

Three quarters of employed graduates indicated that they were better paid in 1998 than in 1995, with Business graduates reporting a high of 85% being better paid, and Fine Arts graduates reporting a low of 58% being better paid. With inflation being relatively stable over this period, there is no doubt that the majority of university graduates experience pay increases over relatively short periods of time, soon after graduation. In actual dollars, the median salary increased over the three-year period by over 30% – well in excess of inflation over the same period. There is no doubt that the majority of university graduates experience real salary increases over relatively short periods of time, soon after graduation.

With such high increases in salary over the three-year period since last being surveyed, it is perhaps not too surprising that three quarters of graduates are more satisfied with their jobs in 1998 than they were in 1995. Given that 90% of the respondents to the 1995 survey said that they were either somewhat or very satisfied, it is safe to say that university graduates experience high levels of job satisfaction.

---

[4] Statistically this phenomenon can appear by chance because, intuitively, the higher rates of unemployment in period 1 have further to fall in period 2, even if initially they are only high by chance. This is not the case here, where differences are statistically significant.

As has been noted frequently in surveys of university graduates, about one-third of graduates work in a job which is not related to their university program, and of course the proportion is lower in the more job specific fields of study (Health and Education) and higher for Arts graduates. This survey shows that across all disciplines, graduates' jobs become less related to their areas of study over time (i.e. over the three year period between the first survey in 1995 and this survey in 1998) with the exceptions of Health, Education, and Social Professions, which become more related to the area of study. This shift away from program-related jobs is most prevalent among graduates in Arts (40%), Science (39%) and Applied Science (36%), as these graduates tend to move into more managerial roles.

Financing University Education

Survey information on students' financing of their education has a number of uses. It can help to isolate specific groups of students where financing may be an access problem; it can inform policy makers on the adequacy of student aid or scholarship programs; and it can be used to track the need for changes in student aid or tuition policies as economic conditions change. This report provides only a general overview, with some limited trend information, but further analysis of the data could yield more insights.

Graduates' primary source of funding for financing a university education is employment income – 48% report this as their primary source, and it does not vary among universities. The next most frequently cited sources of finance are parents and student loans, but the order and magnitude of the number of responses varies by university. At UBC, where students are relatively young, 23% cite parents as their primary source of funding, whereas at SFU only 15% cite parents, while 17% cite student loans.

While scholarships and awards are not a primary source of funding for many students, the survey showed that they were the primary source for 7% of SFU graduates, 3% of UBC graduates and 2% of UVic graduates.

Despite the high proportions of students for whom employment income is the major source of education funding, 44% of graduates do incur some debt. The largest proportion of students incurring debt is at UVic, where 51% of graduates had incurred debt, versus SFU and UBC, where only 42% had incurred some debt.

For those who do incur debt, the median debt is $12,500, and the mean is $15,200 – the higher mean reflecting the small proportion of graduates with extremely high debt: 4% have debt in excess of $40,000. Ten percent of graduates had debt of over $30,000, suggesting that very few students finance their education entirely by borrowing. Nearly all of the debt is financed by government student loans; of the average debt, 97% was government loans. Levels of private debt are small, but provide government with a critical indicator as to the adequacy of student aid programs and it represents a true financial access barrier.

The graduating class of 1997, four years later, had a mean debt of $20,102[5]. Controlling for inflation, this suggests that debt loads are increasing (approximately a $3,000 increase in real terms over the period). Given that so much of the financing for university education comes from employment income, the increase may be attributable to the poorer labour market in British Columbia in the mid 90's versus the late 80's and early 90's.

After five years, 48% of those with debt had paid it off, and not surprisingly, the disciplines with the highest incomes and lowest rates of unemployment (see above) tended to have the largest proportions with paid off loans.

Enhancement of Skills and Abilities

University graduates have been assessed and measured exhaustively throughout their time at university, through exams, papers, presentations, etc. The nature of this evaluation process in all B.C. universities, along with the review process, ensures a high level of skill and knowledge development. But a university education also develops and enhances more general skills than those evaluated by the professors in individual courses. Therefore the Graduate Follow-Up Surveys ask graduates to rate the extent to which they have acquired certain key skills.

On four of these general areas of student development we can compare the responses of graduates after two years with graduates after five years[6]. Analysis of these responses addresses the assertion that graduates change their opinions of their university education in retrospect. The results of a comparison two years out and five years out are shown in Table 2 below.

Table 2. Percentage of university graduates who had developed skills as a result of their university education.
Responses after two years (1995) and after five years (1998).

	Year Surveyed	
Skill Developed	**1995**	**1998**
Ability to analyze and think critically	92	91
Ability to think creatively	76	72
Ability to write well	77	79
Ability to work with others	80	72

Note: Not all graduates were surveyed in both years.

[5] Hawkey, Colleen, Walter Sudmant, and Wrency Wu (forthcoming). *Two Year Follow Survey of 1997 Baccalaureate Graduates from BC's Public Universities: Report of Findings.* The University Presidents' of British Columbia.

[6] Not all graduates were surveyed twice, so we are comparing group differences, not within individual differences.

Of the four areas, three show very similar results, indicating that graduates perceptions of their own learning are fairly consistent over time. The one area where that is not the case is the ability to "work with others". Evidently further experience in the workplace results in university graduates re-assessing downward the extent to which they acquired those skills at university.

This survey added three areas of development in addition to those shown above: "Personal Growth", "Ability to Use a Computer"; and "Development as a Life-Long Learner". Results by discipline grouping are shown below. Overall the results show that graduates from all disciplines are very likely to have acquired aspects of personal growth and critical thinking skills in the course of their university education. Creative thinking skills, writing skills, and "working with others" are less likely to have been acquired across all disciplines: Creative thinking was more prominent among Fine Arts graduates; writing skills were most prominent among Arts and Social Professions, and "working with others" was more prominent among Business and Education (Table 3). Ability to use a computer was rated lowest by all except Applied Science students; computer use per se is not part of most university level curricula.

Table 3. Percentage of university graduates who said they had developed the following skills to a great extent or to some extent.

Skill Developed	Total	Arts	Educ	ApSc	Sci	Bus	FPA	Health	Social
Personal growth	92	94	91	90	89	88	93	93	93
Analyze and think critically	91	93	85	97	93	92	89	90	94
Think creatively	72	76	76	65	63	61	85	69	78
Ability to write well	79	88	75	70	70	78	76	74	85
Work effectively with others	72	66	80	81	68	79	72	75	79
Ability to use a computer	41	37	32	74	51	59	26	32	26
Life-long learner	80	82	84	77	74	73	79	81	77

Summary

Most of the findings of previous graduate surveys are reinforced by the results of the five year out survey of graduates of 1993: graduates of B.C. universities are generally satisfied with their education, make transitions to good jobs which require the skills acquired at university, and report high levels of personal development acquired in the course of their university education. Furthermore, the levels of satisfaction, employment, and earnings do not differ dramatically among disciplines studied, nor are they related to the particular university from which a student graduated.

This survey is unique in that that responses of graduates were collected twice: two years out and five years out, therefore the data allows us to investigate issues of transition,

changes in employment and education, and earnings growth over time. The survey also permits us to examine the robustness over time of some of the findings of earlier studies.

Overall levels of satisfaction with university education are extremely robust over time. There is no evidence that graduates, after three years of reflection, change their basic view of the value of their university education: they are satisfied. However there is evidence that after exposure to the labour market, about a third of university graduates would not take the same program again – instead they would take something more job-related. This observation is also stable over time.

The period between two years after graduation and five years after graduation is one of considerable transition for university graduates; it is a time unlike any other period in life in terms of the movement from job to job, from job to school, from part-time to full-time (school and work), and from participation and non-participation in the labour force. These transitions make it somewhat difficult to obtain accurate and useful measures of standard indicators such as the unemployment rate. Some conclusions and policy implications do follow.

1. Long term unemployment, and underemployment in all of its forms are rare; university graduates are in no way similar to the classic picture of the chronically unemployed or underemployed. Though some may undergo a difficult transition, most find appropriate and satisfying places in the labour market.

2. The flexibility of a university education is confirmed by the range of opportunities, both employment and educational, of which university graduates take advantage. Many university graduates find highly successful careers in fields that may not seem directly related to their education, and graduates often adapt quickly to new information about the labour market through further education.

3. Those who do graduate in very job-specific fields are very likely to work in those fields: education graduates work in education and health professionals work in health.

4. Evidence from both the transition patterns and from the advice of graduates themselves suggests that there may be considerable value in closer liaison between the universities and the labour market. Co-op education is only one way this can be achieved.

University graduates should expect to undertake some further education after graduation. After five years, three quarters of graduates have taken some form of further formal education. This further education is viewed by most graduates as an enhancement, supplement, or continuation of their university education, often taken for career advancement rather than career change. For the majority of graduates, further education takes the form of graduate level studies (especially in the Sciences), or professional training. Only a university education can provide the vast opportunities for continued growth and adaptation through such a wide variety of possibilities for further education.

By noting differences between the employment characteristics of graduates two years after graduation and five years after graduation it is clear that university graduates experience significant progress early in their careers. After five years we observe significant real increases in earnings, higher proportions of jobs in management and professional occupations, lower levels of involuntary part-time employment, and most importantly, higher levels of job satisfaction. University graduates also report that as their careers progress, they are less likely to utilize the specific knowledge from their discipline, but more likely to use the general skills they acquired at university – problem solving, writing, analysis, critical thinking. Finally, the rate of self-employment increases rapidly over time for university graduates. Overall the pattern of industries entered by university graduates shows a logical flow from university disciplines to the knowledge economy, and no sign of pools of graduates in dead-end jobs.

Graduates' perceptions of the skills acquired at university are also robust over time, with one notable exception: working with others. Cognitive skills acquired at university are consistently rated as having been well developed, but "working with others" appears to be one skill that does not pass the test of time. Recent graduates are much more confident in having acquired this skill at university than are more experienced graduates.

Many of the graduates of 1993 entered a period of transition to the labour market at a time when unemployment was high and per capita economic growth in the B.C. economy was low or negative. Nevertheless, university graduates showed much lower levels of unemployment than the overall labour force, reported high levels of satisfaction with their education, and achieved substantial increases in earnings. While there is still much more that can be learned from this survey of graduates at a departmental and program level, this survey reinforces the already strong evidence that B.C. universities are meeting the needs of the B.C. economy as well as the personal and life-long learning needs of their students.

APPENDIX C

SURVEY INSTRUMENT

1998 SURVEY OF 1993 BC UNIVERSITY GRADUATES
FIVE YEARS AFTER GRADUATION

NOTE: Two groups will be surveyed

A - All those who were not contacted in 1995
B - Those who responded to 1995 Survey

This survey is made up of 8 sections

A Education History
B Current Job
C How Can We Improve
D Satisfaction
E Financial
F Employment Mobility
G How did University Education Affect Your Life
H Data Sharing

Note to Interviewer - Phone Numbers with the prefix 250 or 604 will not be asked questions F1 and F1a.

Q:A1

My name is _____ and I'm calling on behalf of _____. We have been contracted by (university) and the Ministry of Advanced Education, Training and Technology to conduct a survey of 1993 BC University Graduates. The purpose of the survey is to determine the benefits of your education and your level of satisfaction with the education or training you received at (university). The information you provide will be kept strictly confidential and will be used only for statistical purposes. May I do the survey with you at this time?

1 Yes
2 No

IF (ANSWER = 1) SKIPTO A1b

Q:A1a

Is there a better time to contact you to complete the survey?

1 Yes (establish time)
2 No

SKIPTO H3

SECTION A:EDUCATION HISTORY

Q:A1b

Our records indicate that you graduated from (university) in 1993 from (name of program). Is this correct?

1 Yes
2 No (wrong program)
3 No(didn't graduate in 1993)
8 Don't Know/Unsure
9 No Response

IF (ANSWER = 1)SKIPTO A2
IF (ANSWER = 3)SKIPTO A1d
IF (ANSWER = 8)SKIPTO A2
IF (ANSWER = 9)SKIPTO A2

Q:A1c

What program were you in? Please specify the full degree name e.g. Bachelor of Education, Bachelor of Arts in Economics, etc. _____

SKIPTO A2

Q:A1d

What year did you graduate? _____

Q:A2

Is it correct that you were born on (date of birth)?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

IF (ANSWER = 1)SKIPTO A3
IF (ANSWER = 8)SKIPTO A3
IF (ANSWER = 9)SKIPTO A3

Q:A2a

Could you please tell us your date of birth? _____

Please enter response in the form MM-DD-YY.

Q:A3

Is this your correct postal code (postal code)?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

IF (ANSWER = 1)SKIPTO A4
IF (ANSWER = 8)SKIPTO A4
IF (ANSWER = 9)SKIPTO A4

Q:A3a

Could you please tell us your postal code? _____

Q:A4

Since graduation from (university) in 1993 have you taken/are you taking any other education or training?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

IF (ANSWER = 2)SKIPTO B1
IF (ANSWER = 8)SKIPTO B1
IF (ANSWER = 9)SKIPTO B1

Q:A4a

What other education or training have you taken/are you taking since graduation from (university) in 1993?
(USE THE MOUSE TO CLICK ON ALL CORRESPONDING NUMBERS THAT APPLY)

Bachelor's degree
Bachelor of Education
Masters degree
Doctoral degree
Technical certificate/diploma
Vocational certificate/diploma
Teacher training

Law degree
Medicine degree
Dentistry degree
Univ professional training
Univ/College academic credits
Technical, short courses
Other

Q:A5

What was your MAIN goal for taking further education or training?

1 Wanted to change fields
2 Lack of suitable employment opportunities
3 Wanted to study at an advanced level
4 General interest/personal development
5 To achieve a career goal
6 Other (please specify)
7 Professional Development
8 Don't Know/Unsure
9 No Response

Q:A5a

On a scale of 1 to 4, where 1 is to a great extent and 4 is to no extent at all, to what extent did your achieve your goal?

1 To a great extent
2 To some extent
3 To a small extent
4 To no extent at all
8 Don't Know/Unsure
9 No Response

SECTION B:CURRENT JOB

Q:B1

The following questions regard your current status.

Are you currently attending school?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

IF (ANSWER = 2)SKIPTO B2
IF (ANSWER = 8)SKIPTO B2
IF (ANSWER = 9)SKIPTO B2

Q:B1a

Are you attending school full-time or part-time?

1 Full time
2 Part time
8 Don't Know/Unsure
9 No Response

Q:B2

Were you employed in the Fall of 1995?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

Q:B2a

Are you currently employed (including self-employment)?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

IF (ANSWER = 2)SKIPTO B5
IF (ANSWER = 8)SKIPTO B5
IF (ANSWER = 9)SKIPTO B5

Q:B2b

Is your current job the same job or position you had in the Fall of 1995?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

IF (B2 = 2)SKP
IF (ANSWER = 1)SKIPTO B2f
IF (ANSWER = 8)SKIPTO B2f
IF (ANSWER = 9)SKIPTO B2f

Q:B2c

Is your current job ...

1 Better paid
2 Worse paid
3 About the same pay
8 Don't Know/Unsure
9 No Response

IF (B2 = 2)SKP

Q:B2d

In terms of job satisfaction in your current job are you...

1 More satisfied
2 Less satisfied
3 About the same
8 Don't Know/Unsure
9 No Response

IF (B2 = 2)SKP

Q:B2e

In your current job, are the skills and knowledge acquired in your (name of program) at (university)...

1 Applied more
2 Applied less
3 About the same
8 Don't Know/Unsure
9 No Response

IF (B2 = 2)SKP

Q:B2f

What is your job title? (e.g. teacher, office clerk, engineer social worker) _____

Q:B2g

In this work, what are your most important activities or duties? (e.g. consulting, instructing students, designing buildings, auditing statements) _____

Q:B2h

How long have you had this current job in years, months, weeks, or days? _____

Q:B3

What is the name of the company you presently work for? _____

Q:B3a

What kind of business, industry or service is this? (e.g. federal government, service industry, forestry services) _____

Q:B3b

Are you working full-time or part-time?

1 Full-time
2 Part-time
8 Don't Know/Unsure
9 No Response

IF (ANSWER = 1)SKIPTO B8
IF (ANSWER = 8)SKIPTO B8
IF (ANSWER = 9)SKIPTO B8

Q:B4

Are you looking for full-time employment or are you working part-time by choice?

1 Looking for full-time employment
2 Part-time by choice
8 Don't Know/Unsure
9 No Response

SKIPTO B8

Q:B5

Do you have a paid job lined up to start at a definite date in the future?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

IF (ANSWER = 1)SKIPTO C1

Q:B6

How many months has it been since you were last employed? _____

Q:B7

What is the main reason you are unemployed?

1 Lack of suitable opportunities
2 I do not have the necessary skills for the jobs I want
3 Unemployed because in school
4 No job but looking for work
5 Homemaker
6 Not in labour force
7 Temporary leave of absence from employment (e.g., travel, maternity, other)
Q Health Reasons
X Family Obligation
Y Retired
Z Temporarily laid off
8 Don't Know/Unsure
9 No Response

SKIPTO C1

Q:B8

Is this employment part of your education? (e.g., articles, co-op, internship)

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

Q:B9

Job Question Instructions

The following questions concern your current job.
If you have more than one job, respond with respect
to the job in which you spend the most time. We will
refer to this as your "main" job.

Q:B10

Are you self-employed?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

IF (ANSWER = 2)SKIPTO B11
IF (ANSWER = 8)SKIPTO B11
IF (ANSWER = 9)SKIPTO B11

Q:B10a

How many people do you employ, NOT including yourself?

0 None
1 One
2 Two
3 Three
4 Four
5 Five
6 Six
7 Seven or more
8 Don't Know/Unsure
9 No Response

Q:B11

How many hours per week do you work at this job?

1 Under 10 hours
2 10 - 19 hours
3 20 - 29 hours
4 30 - 39 hours

5 Over 40 hours
8 Don't Know/Unsure
9 No Response

Q:B12

What is your gross annual income from this job (including commissions, etc.,) before deductions?

1 Yes (able to provide response)
2 Unwilling to Respond
8 Don't Know/Unsure
9 No Response

8 Don't Know/Unsure
9 No Response

Q:G2f

Encouraged to be a life-long learner

1 To a great extent
2 To some extent
3 To a small extent
4 To no extent at all
8 Don't Know/Unsure
9 No Response

SECTION H:DATA SHARING

Q:H1

(university) plans to link the data from this survey with administrative data. All information provided will be kept strictly confidential and will be used only for statistical purposes. Do you agree to share your information with the University and the Ministry of Advanced Education, Training and Technology for the purposes of statistical reporting?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

Q:H2

The Alumni Association would like to be able to contact former graduates of (university) to provide them with information on activities and special events occurring at (university). Do you agree to share your telephone number and address with the Alumni Association or Alma Mater Society?

1 Yes
2 No
8 Don't Know/Unsure
9 No Response

Q:H3

Thank you very much for your time.

APPENDIX D
STATISTICAL SUMMARIES

The following statistical summary reports provide an overview of the survey results in tabular and graphical form for the BC System overall, for each of the three B.C. universities, and for each of the 8 program areas.

BC SYSTEM SUMMARY

High-level summary for all BC universities and programs combined.

The following university and program summaries were excluded from the printed report, but are available on The University Presidents' Council Web Site:
www.tupc.bc.ca/graduate_outcomes

UNIVERSITY SUMMARIES

Survey results are highlighted for each university and compared against the BC System overall.

- **Simon Fraser University (All University Programs) vs. B.C. System (All University Programs)**
- **University of British Columbia (All University Programs) vs. B.C. System (All University Programs)**
- **University of Victoria (All University Programs) vs. B.C. System (All University Programs)**

PROGRAM SUMMARIES

Survey results for each of the major program areas in the BC System are compared against all BC System programs combined.

- **B.C. System (Arts) vs. B.C. System (All University Programs)**
- **B.C. System (Education) vs. B.C. System (All University Programs)**
- **B.C. System (Applied Sciences) vs. B.C. System (All University Programs)**
- **B.C. System (Science) vs. B.C. System (All University Programs)**
- **B.C. System (Business/Commerce) vs. B.C. System (All University Programs)**
- **B.C. System (Fine & Performing Arts) vs. B.C. System (All University Programs)**
- **B.C. System (Health) vs. B.C. System (All University Programs)**
- **B.C. System (Social Programs) vs. B.C. System (All University Programs)**

STATISTICAL SUMMARY OF THE 1998 FIVE-YEAR FOLLOW-UP SURVEY OF 1993 BACCALAUREATE GRADUATES FROM B.C.'s PUBLIC UNIVERSITIES

Prepared for

The University Presidents' Council

of British Columbia

5-Feb-01

by Joanne Heslop

Simon Fraser University

1998 FIVE-YEAR FOLLOW-UP SURVEY OF

1993 BACCALAUREATE GRADUATES FROM B.C.'s PUBLIC UNIVERSITIES

Contents

	Page
DEMOGRAPHICS *Response rate, Gender, Age, Place of Residence, Reasons for leaving B.C.*	3
PROGRAM OF STUDY *Program and satisfaction.* *Would you take the same program again? Why not?*	4
FURTHER EDUCATION *Further education participation rate.* *Type of further education pursued and reasons.* *Achievement of further education goals, school attendance and status.*	5
EMPLOYMENT & UNEMPLOYMENT *Employment and unemployment rates.* *Reasons for unemployment or non-labour force participation.* *Number of months since last employment.*	6
CURRENT JOB *Classification of current job by industry sector, skill type and skill level.* *Duration of current employment, comparison between 1995 job and 1998 job.* *Employment status, self-employment, annual income, job characteristics.*	7-10
FINANCES *Education funding sources. Total debt incurred. Government student loan debt.* *Outstanding debt.*	11-12
EFFECT OF UNIVERSITY EDUCATION *Extent to which skills were developed or enhanced as a result of university education.*	13

1998 FIVE-YEAR FOLLOW-UP SURVEY OF
1993 BACCALAUREATE GRADUATES FROM B.C.'s PUBLIC UNIVERSITIES
Notes

Demographics:

1. **Response Rate.**
   a) Response rate is calculated on a "valid sample". This valid sample excludes graduates without a phone number, visa students and graduates living outside of North America.
   b) Of those B.C. University graduates surveyed in 1998, approximately 85% had been previously surveyed in 1995 (two years after graduation).

4. **Place of residence, as at December 1998.**
   Place of residence was determined from postal code. Graduates living outside of North America, graduates without a phone number and visa students were excluded from the survey.

5. **When did you leave B.C.?**
   This question was only asked of those whose postal code or telephone number was outside of British Columbia.

6. **Main reason for leaving B.C.**
   a) This question was only asked of those whose postal code or telephone number was outside of British Columbia.
   b) Open-ended responses were recorded by the interviewers and later re-coded into six different reasons for leaving British Columbia.

Program of Study:

7. **Program of Study.**
   Graduates in this study were grouped into one of eight different program areas.
   Applied Science (ApSc) - mainly Engineering, but also includes applied areas such as Forestry and Agricultural Sciences.
   Arts - Social Sciences and Humanities.
   Business (Bus) - graduates from the Faculty of Commerce at UBC and the Faculty of Business Administration at SFU.
   Education (Educ) - those who have completed a teacher training program (Professional Development Program (PDP) at SFU). Most students completing a teacher training program have previously completed a four-year bachelor's degree.
   Fine and Performing Arts (FPA) - Music, Dance, Theatre, Film and Fine Arts.
   Health Sciences (Health) - Medicine, Dentistry, Human Kinetics, Nursing from UBC and Human Performance and Nursing from Uvic. There are no Health Sciences programs at SFU.
   Science (Sci) - basic sciences and is dominated by the life sciences.
   Social Professions (Social) - Law and Social Work at UBC, plus Social Work, Child and Youth Care and Law at Uvic.

Further Education:

12. **Type of Further Education pursued.**
    A maximum of nine types of further education or training were recorded. All responses were combined and the total frequencies of each type of further education are provided. The %'s are based on the total number of responses.

Employment & Unemployment

17. **Employment Rate of 1993 Graduates.**
    a) Employed graduates are those who stated they were "currently employed" or "have a paid job lined up to start".
    b) Unemployed graduates who are actively looking for work are those who stated they were not currently employed for the following reasons: "Lack of suitable employment opportunities", "I do not have the necessary skills for the job I want", "No job, but looking or work", "Temporarily laid off", "Don't Know/Unsure".
    c) Total Labour Force = Employed + Have Paid Job Lined up to Start + Unemployed, but Actively Looking for Work.
    d) Employment Rate = Total Employed at Time of Survey / Total Labour Force.
    e) Unemployment Rate = Unemployed, but Actively Looking for Work / Total Labour Force.
    f) 1998 employment rate and 1995 employment rates of 1993 graduates are provided for comparison.

18. Main reason why you are unemployed.

The reason for unemployment is shown only for those who are in the labour force (unemployed, but actively looking for work).

19. Main activity of graduates who are not in the labour force.

The reason for unemployment is shown for those who are unemployed and NOT in the labour force.

20. How many months since you were last employed? (For graduates unemployed or not in labour force.)

This question was asked of all graduates who were not working at the time of the survey, regardless of whether they were in the labour force.

Current Job:

21. Classification of current main job by industry sector.

The North American Industry Classification System (NAICS) is a hierarchical system for classifying places of employment by type of economic activity. The NAICS Canada system contains 20 Sectors, 99 Sub-sectors, 321 Industry Groups, 734 Industries and 921 National Industries. This table summarizes the place of employment of graduates into one of 20 Industry Sectors.

22. Classification of current main job by NOC Skill Type.

The National Occupational Classification (NOC) system was developed by Human Resources Development Canada. The NOC coding system classifies and describes occupations in the Canadian labour market. The NOC system classifies approximately 25,000 job titles into three tiers: 26 Major Groups, 139 Minor Groups, and 522 Unit Groups. One of the ways in which these groups are related is by Skill Type. The skill type is based on the type of work performed. It also reflects the field of training or experience that is normally required for entry into the occupation (area of study and industry of employment). There are ten different skill types (based on the first digit of the NOC code). The jobs held by graduates are categorized by NOC skill type in this table.

23. Classification of current main job by NOC Skill Level.

Refer to note 7.07 for a brief description of the NOC system. One way in which the NOC groups are related is by Skill Level. The skill level is primarily based on the nature of education and training required to work in an occupation, plus the experience required for entry, complexity and responsibilities. There are four different skill levels (indicated by the second digit of the NOC code). The jobs held by graduates are categorized by NOC skill level in this table. The four skill levels are:

A. University degree at the bachelor, masters or post-graduate level (2nd digit of NOC code = 1).
B. College level education including trade apprenticeships (2nd digit of NOC code = 2 or 3).
C. Secondary school education (up to four years) plus a period of job-specific training (2nd digit of NOC code = 4 or 5).
D. No formal education required - up to 2 years of secondary school educ. and short work demonstration (2nd digit of NOC code = 6).

25. Did you change jobs from 1995 to 1998?

This question was only asked of those who were employed in both the Fall of 1995 and the Fall of 1998.

26. How has your income changed from 1995 to 1998?

This question was only asked of those who were employed in both the Fall of 1995 and the Fall of 1998, but not in the same job.

27. How has your job satisfaction changed from 1995 to 1998?

This question was only asked of those who were employed in both the Fall of 1995 and the Fall of 1998, but not in the same job.

28. How has the application of your university skills/ knowledged changed in your 1998 job vs. 1995 job?
This question was only asked of those who were employed in both the Fall of 1995 and the Fall of 1998, but not in the same job.

29. Are you employed full-time or part-time?
Respondents were asked to self-declare the full-time/part-time employment status. A "full-time" job was not defined by the interviewer.

32. What is your annual full-time employment income?
a) Only includes graduates who were self-declared as full-time employed.
b) In some cases, graduates are working multiple jobs such that they are full-time employed. In these cases, the employment income from all of their jobs are included in the annual full-time earnings.
c) Salaries recorded below $10,000 are considered invalid since this would place the graduate below the minimum wage.

33. Median annual full-time employment income.
Median salaries are rounded to the nearest $100.

35. Characteristics of current job.
a) The proportion of graduates looking for a better job, requiring a bachelor's degree for their job and are in a job related to their program are expressed as a percentage of employed graduates.
b) The proportion of graduates whose skills/knowledge are applied to their job is expressed as a percentage of graduates in a program-related job.

36. Why are you not in a more program-related job?
This question was only asked of those graduates who are not in a program-related job.

Finances:

38. ALL sources of education funding.
Respondents were asked to state ALL sources of funding for their education. A maximum of six sources of funding were recorded for each respondent.

40. Did you incur financial debt in order to complete your program at university? How much debt did you incur?
Mean and median debt are rounded to the nearest $100.

41. Did you receive government student loans? How much government loan debt did you incur?
Mean and median government student loan debt are rounded to the nearest $100.

42. Do you have any government loan debt outstanding? How much gov't loan debt is outstanding?
Mean and median outstanding government student loan debt are rounded to the nearest $100.

Effect of University Education:

43+ To what extent were the following skills developed or enhanced as a result of your university education?
Graduates were asked to assess the extent to which their university education resulted in any skill development or enhancement on each of seven different skills (personal growth, critical thinking, creative thinking, writing well, working effectively with others, ability to use a computer and encouraged to be a life-long learner).
